PROFILE

Currently studying computer engineering at *ISCTE-IUL*. Technical expertise in a few programming languages, with **Java** being my favorite one so far, also working on teamwork and social skills in order to be able to grow and learn more in this field

LANGUAGES

English — Conversational

Português — Native/Bilingual

SKILLS

- Java
- SQL
- Scala
- HTML, CSS e JavaScript
- React
- Comunication
- TeamWork

PROFESSIONAL EXPERIENCE

NET - Núcleo de Estudantes de Tecnologias do ISCTE-IUL
IT department collaborator
03/2024 – 09/2025
While working for NET at IT, I was part of a team that faced the challenge of creating an efficient, simple, and aesthetically pleasing website. We worked using GitHub, developed in VS Code, and handled multiple languages such as HTML, CSS, JavaScript, Python, and Django.

NET - Núcleo de Estudantes de Tecnologias do ISCTE-IUL
RH department collaborator
10/2025 – Present
While working for NET at RH, I developed my people management skills and gained a deeper understanding of team dynamics. I now realize the critical importance of making people feel heard and valued. This approach fosters a more positive work environment and directly leads to better performance.

PERSONAL PROJECTS

WebSite Podcast
My friends and I have a sports podcast, and they asked me to build a website that works like a sports journal where they can post news.
To take on this project, I had to teach myself CSS, React, and how to work with a database, as well as how to publish the website.
This project was very challenging, especially given the timeframe, but it was definitely my favorite. Having to learn everything on my own was very tough, but I'm proud of what I built.

UNI PROJECTS

WebSite NET
While working for NET, I was part of a team that faced the challenge of creating an efficient, simple, and aesthetically pleasing website. We worked using GitHub, developed in VS Code, and handled multiple languages such as HTML, CSS, JavaScript, Python, and Django.

WebSite Vinisys
In the second semester of my second year at ISCTE, our class was divided into groups of seven people, each tasked with implementing a website for a wine company called Vinisys. We used the Signavio platform (for BPMN processes, use case diagrams, state diagrams and class tables), Figma (for mockups), and OutSystems. We handled both the front office and back office. It was the most complete uni project I've worked on so far

Game Sudoku
In my first semester as a freshman at ISCTE, I developed a Sudoku game in Java using Eclipse and a tool called PandionJ. Later, in the second semester of my second year, I built an algorithm in Prolog that, given a valid Sudoku matrix, returns a valid solution.

Game DonkeyKong
In the first semester of my second year at ISCTE, I worked on my favorite project so far: a Donkey Kong game developed in Java using Eclipse. We didn't really work with the GUI or TUI — we only needed a basic understanding of them, as we didn't implement any interface components.

Game AtariGo
In the second semester of my second year at ISCTE, I worked on an Atari Go game using Scala in IntelliJ. I also developed the GUI and TUI. This project involved a lot of recursion, which taught me a great deal about efficiency and how important it is.

Game Kahoot
In the first semester of my last year at ISCTE, I worked on an Kahoot game wiht one colleague, using Java. We had to make the GUI and TUI, and I really enjoyed working on this project.
